

One day there was a humid sunny day in Kansas City, MO. A girl was walking down the moving road. While she was walking, she saw the robots coming down the road. They asked her if she wanted a ride to her destination. She replied with, "Yes, please, will I have to return the car?"

"No, you may keep the car for as long as you want just pay your fees for keeping the car Brianna."

The robot replied with no facial expression. Brianna is the girl's name. As Brianna got into the car she found that there were no keys and she searched and searched for the keys. But then she realized the car was foot powered. As she started to drive the car flew up into the air. She kind of got scared because she was scared of heights. But she continued to drive at a constant pace. Later on in the ride the computer flying car started to speak.

It said "Hi, Brianna I am programmed to know everything about you and I am going to make your favorite food, your favorite food is French fries and hot Buffalo wings."

"This is so cool! Could I have some ranch dressing with that please?" Brianna said proudly.

"Yes you may Brianna." The robot said with a fake smile. Brianna was eating her wings while driving. She finished eating about ten minutes later. She finally reached her destination and she flew back down towards the ground.

Organization/Purpose – 2+

- Weak opening and closure "One day" "finally"
- Some transitions "Later on in the ride"
- Minimally develops character "scared of heights"

Evidence/Elaboration – 2

- Inconsistent narrative techniques (listy)
- Language generic "destination" "powered" "searched" "robot"
- Events undeveloped

Conventions – 2

- Few punctuation errors—commas
- Few spelling errors—slide for slid, relied for realized
